DETAILED ACTION

1. The amendment filed on April 11, 2002 has been entered. Claims 1-29 are pending.
2. Claims 1-16 and 25-29 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 6.
3. Applicant's arguments with respect to claims 17-20 and 22-24 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 17-20 and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanematsu et al. (U.S. Patent 6,287,504) in view of Hirofumi et al. (JP 06-315961).

Kanematsu et al. discloses a plastic molding used in an optical device. The reference describes prior art molded articles in which desired sinking occurs on a particular surface (equivalent to the imperfect transfer portion) (col. 7, lines 1-7, Fig. 3A-

Art Unit: 1773

5B). Hirofumi et al. discloses an injection molded part with multiple sink marks. One skilled in the art would have found it obvious to include multiple imperfect transfer portions in the molded article of Kanematsu et al. The motivation for doing so would have been to optimize and control the sinking of the final molded product.

Allowable Subject Matter

6. Claim 21 is allowable over the prior art. The closest prior art, Kanematsu et al., does not reasonably teach or suggest applying the imperfect transfer portion between the transfer surface and the second transfer surface so as to have a contour disposed apart from edges of both the transfer surface and the second transfer surface.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
